

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Event, Talent, Production, Marketing & Creative Operations Management System

Project Name: Event Management and Creative Operations Platform

Document Type: Software Requirements Specification (SRS)

Platform: Web Application

Primary Purpose:

A centralized platform for managing events, talents, production, promotion, marketing, projects, tasks, teams, communication, meetings, calendars, personal planning, notifications, and reports.

This updated SRS combines the original requirements—covering event management, talent management, production, promotion, marketing, tasks, teams, collaboration, notifications, and reporting—with the new Discuss, Calendar, Meeting, and To-Do requirements.

1. Introduction

1.1 Purpose

The Event Management and Creative Operations Platform is a centralized web-based system designed for an entertainment, creative, talent management, production, marketing, or event management organization.

The platform will provide one unified workspace where management and employees can:

- Create and manage events.
- Manage talents and artists.
- Manage production projects.
- Plan promotion activities.
- Manage marketing campaigns.
- Create and assign tasks.
- Manage teams and departments.
- Communicate through direct messages and channels.
- Schedule and manage meetings.
- View work and events through a centralized calendar.
- Create personal and work-related To-Do items.

- Track progress and deadlines.
- Receive notifications.
- Submit and review reports.

The main purpose is to connect all company activities in one system instead of managing events, tasks, communication, and schedules using separate applications.

2. System Objectives

The system shall:

1. Centralize company operations.
2. Improve communication between departments and employees.
3. Manage events from planning to completion.
4. Track projects and operational activities.
5. Assign and monitor employee tasks.
6. Manage talents, artists, influencers, and creative personnel.
7. Manage production activities.
8. Manage promotion and marketing campaigns.
9. Provide internal communication through direct messages and channels.
10. Allow teams to schedule and manage meetings.
11. Provide a centralized calendar for events, meetings, tasks, and deadlines.
12. Allow employees to manage personal To-Do items.
13. Monitor team and department performance.
14. Generate daily, weekly, and monthly reports.
15. Provide management with a real-time overview of company operations.

3. System Scope

The platform shall consist of the following major modules:

Event Management and Creative Operations Platform

|

|— Dashboard

|

└─ User & Access Management

| └─ Users

| └─ Roles

| └─ Permissions

| └─ Departments

| └─ Teams

|

└─ Event Management

|

└─ Talent Management

|

└─ Production Management

|

└─ Promotion Management

|

└─ Marketing Management

|

└─ Project Management

|

└─ Task Management

|

└─ Discuss

| └─ Direct Messages

| └─ Channels

| └─ Meetings

|

└─ Calendar & Scheduling

|

|— To-Do Management

|

|— Notifications

|

|— Reporting & Analytics

4. User Roles and Permissions

The system shall implement **Role-Based Access Control (RBAC)**. The original requirements already define Super Admin, Management/Administrator, Department Manager, Team Member/Employee, and Talent/Artist Manager roles.

Permissions should also be configurable so that future roles can be added without changing the application code.

4.1 Super Admin

The Super Admin shall have complete access to the system.

Permissions

- Manage users.
- Create and manage roles.
- Configure permissions.
- Manage departments.
- Manage teams.
- Create and manage events.
- Create and manage projects.
- View all tasks.
- View all reports.
- Manage system settings.
- Monitor all system activities.

4.2 Management / Administrator

Management users shall supervise company operations.

Permissions

- Create and manage events.
- Create projects.
- Create campaigns.
- Assign teams.
- Create and assign tasks.
- Monitor project progress.
- Review and approve work.
- View department performance.
- View reports.
- Schedule meetings.
- Create project or event channels.
- Access management analytics.

4.3 Department Manager

Each department may have a manager.

Examples include:

- Marketing Manager
- Promotion Manager
- Production Manager
- Event Manager
- Talent Manager

Permissions

- Manage department activities.
- Create department tasks.
- Assign employees.
- Monitor task progress.
- Review submitted work.
- Manage department channels.
- Schedule department meetings.

- View department calendars.
- Submit department reports.

4.4 Team Member / Employee

Employees shall be able to:

- View assigned tasks.
- Update task status.
- Update progress.
- Upload attachments.
- Add comments.
- Communicate with team members.
- Send and receive direct messages.
- Participate in channels.
- View assigned meetings.
- Use the calendar.
- Create personal To-Do items.
- Submit completed work.
- Submit daily reports.

Employees shall not access sensitive management information unless authorized.

4.5 Talent / Artist Manager

The Talent Manager shall:

- Create talent profiles.
- Manage talent availability.
- Assign talents to events.
- Assign talents to projects and campaigns.
- Manage talent activities.
- Track talent schedules.

5. Functional Requirements

5.1 Dashboard

The system shall provide dashboards based on user roles.

5.1.1 Management Dashboard

The management dashboard shall display:

Overview

- Total Events
- Upcoming Events
- Active Projects
- Active Campaigns
- Pending Tasks
- Completed Tasks
- Overdue Tasks
- Active Employees
- Active Talents

Today's Overview

- Today's events
- Today's meetings
- Today's deadlines
- Tasks requiring attention
- Overdue activities

Communication

- Unread messages
- Active channels
- Upcoming meetings

Analytics

- Task completion rate
- Department performance

- Event progress
- Marketing campaign progress
- Promotion performance
- Monthly activity overview

5.1.2 Employee Dashboard

Employees should see:

MY DASHBOARD

|

└─ My Tasks

└─ My To-Do

└─ Today's Schedule

└─ Upcoming Meetings

└─ Upcoming Deadlines

└─ Unread Messages

└─ Recent Activity

The employee dashboard should answer the question:

What do I need to do today?

5.2 User Management

The system shall allow authorized administrators to:

- Create users.
- Update users.
- Deactivate users.
- Assign roles.
- Assign departments.
- Assign teams.
- Manage user status.

User information should include:

First Name

Last Name

Email

Phone

Profile Photo

Role

Department

Status

5.3 Department Management

The system shall allow management to create departments.

Examples:

Management

Event Management

Production

Promotion

Marketing

Talent Management

Creative Department

Each department should contain:

- Department Name
- Description
- Department Manager
- Employees
- Teams
- Active Projects
- Active Tasks

5.4 Team Management

Management shall be able to create and manage teams.

Examples:

- Marketing Team
- Promotion Team
- Production Team
- Event Team
- Creative Team

Each team should contain:

Team Name

Department

Team Manager

Team Members

Active Projects

Active Events

Teams can be assigned to events, projects, campaigns, and tasks.

5.5 Event Management Module

The Event Management module shall allow management to create, plan, execute, and monitor events.

Event Types

The system should support:

- Film Premiere
- Concert
- Album Release
- Product Launch
- Corporate Event
- Promotional Event
- Other Events

Event Information

Each event shall contain:

Event Name

Event Type

Description

Start Date

End Date

Start Time

End Time

Location

Organizer

Event Manager

Teams

Status

Budget (Optional)

Event Status

Planning

In Progress

Ready

Completed

Cancelled

Event Workspace

This is one of my strongest recommendations.

When a user opens an event, the system should provide a complete workspace:

EVENT: MUSIC CONCERT

|

└— Overview

└— Event Details

└— Teams

└— Talents

└— Tasks

└─ Calendar

└─ Discussion Channel

└─ Meetings

└─ Files

└─ Reports

All event-related information should be connected.

Event Workflow

Create Event

Assign Event Manager

Assign Departments / Teams

Create Tasks

Assign Employees

Create Discussion Channel

Schedule Meetings

Track Progress

Event Execution

Event Completed

Generate Report

5.6 Talent Management Module

The system shall manage talents associated with the organization.

Examples:

- Artists
- Influencers
- Actors
- Musicians
- Models
- Presenters
- Content Creators

Talent Profile

Each talent profile should contain:

Full Name

Profile Photo

Talent Type

Email

Phone

Social Media Links

Biography

Availability

Manager

Status

Talent Status

Available

Assigned

Unavailable

Inactive

Talents may be assigned to:

- Events
- Campaigns
- Productions
- Promotional Activities

5.7 Production Management Module

The Production module shall manage creative and production-related projects.

Examples include:

- Video Production
- Advertisement Production
- Event Production
- Film Production
- Creative Content Production

Production Project Information

Project Name

Description

Production Type

Start Date

Deadline

Project Manager

Team Members

Status

Each production project shall be connected to:

- Tasks
- Team members
- Calendar schedules
- Discussion channels
- Meetings
- Reports

5.8 Promotion Management Module

The Promotion module shall manage promotional activities related to events, artists, products, or campaigns.

Promotion channels may include:

- Content Creation
- Social Media
- Influencer Marketing
- Radio Promotion
- Television
- Screens / Digital Media
- Advertising

Promotion Campaign

Each campaign should contain:

Campaign Name

Related Event / Product

Description

Start Date

End Date

Target Audience

Budget

Campaign Manager

Status

Each campaign should also be connected to:

- Tasks
- Calendar
- Discussion channel
- Team
- Reports

5.9 Marketing Management Module

The Marketing module shall allow the organization to plan and manage marketing activities.

Features include:

- Create marketing strategies.
- Create marketing campaigns.
- Assign marketing teams.
- Create marketing tasks.
- Track campaign progress.
- Monitor campaign performance.

Marketing Workflow

Marketing Strategy

↓

Marketing Campaign

↓

Campaign Activities

↓

Tasks

↓

Assigned Employees

↓

Progress Tracking

↓

Reporting

5.10 Project Management

The system should support general projects in addition to production, marketing, and promotion.

Each project should contain:

Project Name

Description

Project Type

Project Manager

Team

Start Date

End Date

Status

Progress

Each project should be connected to:

Project

|

└─ Tasks

└─ Team

└─ Calendar

└─ Discussion Channel

└─ Meetings

└─ Files

└─ Reports

5.11 Task Management Module

Task Management shall be a core module of the platform.

Tasks may belong to:

- Events
- Production Projects
- Marketing Campaigns
- Promotion Campaigns
- General Projects
- Department Work

This follows the original requirement that tasks are connected to the organization's operational modules.

Task Information

Each task shall contain:

Task Title

Description

Department

Related Event

Related Project

Related Campaign

Assigned Users

Priority

Start Date

Due Date

Status

Progress Percentage

Attachments

Comments

Task Priority

Low

Medium

High

Urgent

Task Views

The system should provide:

List View

For filtering and searching.

Kanban Board

TO DO

↓

IN PROGRESS

↓

UNDER REVIEW

↓

COMPLETED

Calendar View

Tasks should appear according to:

- Start Date
- Due Date
- Deadline

5.12 Discuss & Communication Module

The **Discuss Module** shall provide internal communication similar to an organizational messaging workspace.

It should include:

Discuss

|

├— Direct Messages

├— Channels

├— Group Conversations

└— Meetings

5.12.1 Direct Messages

Users shall be able to communicate privately.

Features:

- Send messages.
- Reply to messages.
- Edit messages.
- Delete messages.
- Share images.
- Share files.
- Mention users.
- View timestamps.
- View read/unread status.

5.12.2 Channels

Users shall be able to create communication channels.

Public Channels

Examples:

#general

#announcements

#marketing

#promotion

#production

Private Channels

Only invited users can access them.

Examples:

#film-premiere-2026

#concert-project

#marketing-campaign-team

Channel Features

Each channel should support:

- Channel name
- Description

- Members
- Messages
- File sharing
- Image sharing
- User mentions
- Pinned messages
- Search messages
- Related Event
- Related Project
- Related Campaign
- Related Team

5.13 Meeting Management

Users with appropriate permissions shall be able to create and schedule meetings.

A meeting should contain:

Meeting Title

Description

Organizer

Participants

Date

Start Time

End Time

Location

Meeting Type

Related Event

Related Project

Status

Meeting Types

Physical

Online

Hybrid

Meeting Workflow

Create Meeting

Select Participants

Select Date & Time

Check Calendar Availability

Send Invitation

Participants Receive Notification

Meeting Appears on Calendar

Meeting Reminder

Meeting Completed

Participants should be able to respond:

Pending

Accepted

Declined

5.14 Calendar & Scheduling Module

The Calendar shall be a central integration module.

It should automatically collect relevant information from other modules.

Events

|

Tasks

|

Meetings

|

Campaigns

|

Projects

|

Personal Plans

↓

CALENDAR

Calendar Views

Day View

Shows the user's daily schedule.

Week View

Shows weekly activities.

Month View

Shows long-term planning.

Agenda View

Displays activities chronologically.

Calendar Entry Types

Event

Task

Meeting

Project Deadline

Campaign

Personal Schedule

Reminder

Calendar Filters

Users should be able to filter:

Events

Tasks

Meetings

Projects

Campaigns

Personal Plans

Personal Calendar

Each user should have a personal calendar showing:

- Assigned tasks.
- Task deadlines.
- Invited meetings.
- Events they are assigned to.
- Project deadlines.
- Personal schedules.

Users should also be able to manually add:

- Personal plans.
- Reminders.
- Notes.
- Private schedules.

Calendar Planning

Users should be able to click a date and create an activity.

Click Date

Create New

Choose Type

Available options:

- Event
- Meeting
- Task
- Reminder
- Personal Plan

5.15 To-Do Module

The To-Do module shall be separate from official Task Management.

Task Management

Used for official organizational work.

To-Do Management

Used for personal planning and lightweight reminders.

To-Do Types

Users may create:

Personal To-Do

Work To-Do

Reminder

Quick Note

Follow-Up

To-Do Information

Title

Description

Priority

Due Date

Due Time

Status

Related Event (Optional)

Related Project (Optional)

Reminder

Created By

To-Do Status

Not Started

In Progress

Completed

To-Do Categories

My Day

Important

Upcoming

Work

Personal

Completed

Smart To-Do Suggestions

The system may automatically suggest To-Do items based on schedules.

Example:

Event Approaching

Suggested Activities

Possible suggestions:

- Confirm venue.
- Confirm talent availability.
- Review promotion activities.
- Prepare meeting materials.
- Review an approaching deadline.

Initially, these suggestions can be implemented using business rules. AI functionality may be added later.

5.16 Collaboration

The platform shall allow users to collaborate through:

- Task comments.
- User mentions.
- File attachments.
- Activity history.
- Task updates.
- Direct messages.
- Channels.

This expands the original collaboration requirements with a centralized Discuss module.

5.17 Notifications

The system shall provide notifications.

Notification types should include:

TASK_ASSIGNED

TASK_DUE

TASK_OVERDUE

TASK_APPROVED

TASK_REJECTED

NEW_MESSAGE

MESSAGE_MENTION

MEETING_INVITATION

MEETING_REMINDER

EVENT_REMINDER

TODO_REMINDER

REPORT_REMINDER

Notification channels:

- In-App Notification
- Email Notification (optional)

The original system already requires notifications for tasks, deadlines, completed work, events, and reports; the updated system expands this to communication, meetings, and To-Do reminders.

5.18 Reporting Module

The system shall support:

- Daily Reports
- Weekly Reports
- Monthly Reports

Daily Report

Employees should report:

- Tasks completed.
- Tasks in progress.
- Problems encountered.
- Next day's plan.

Weekly Report

Should include:

- Tasks completed.
- Tasks pending.
- Overdue tasks.
- Department activities.
- Major achievements.
- Challenges.
- Next week's plan.

Monthly Report

Should include:

- Total projects.
- Completed projects.
- Active projects.
- Completed tasks.
- Pending tasks.
- Department performance.
- Employee performance.
- Major achievements.
- Challenges.

These report structures preserve the original SRS requirements.

6. Database Entities

The following entities are recommended.

10. Recommended Technical Architecture

Frontend

Next.js

TypeScript

Tailwind CSS

shadcn/ui

Backend

NestJS

REST API

JWT Authentication

Role-Based Access Control

WebSocket / Real-Time Communication

Real-time technology is particularly important for:

- Direct messages.
- Channels.
- Notifications.
- Task updates.

Database

PostgreSQL

Prisma ORM

11. Non-Functional Requirements

Security

The system shall support:

- Secure authentication.
- Password hashing.
- JWT authentication.
- Role-Based Access Control.
- Permission checks.
- HTTPS.
- Input validation.
- Rate limiting.
- Secure file uploads.
- Audit logging.
- HTTPS/SSL on all domains.
- Input validation and sanitization on every form and API endpoint.
- Protection against SQL injection, XSS, and CSRF.
- Rate limiting on auth, forms, and high-cost endpoints

Performance

The system should:

- Load dashboards efficiently.
- Use pagination.
- Optimize database queries.
- Support real-time messaging.
- Handle multiple users simultaneously.
- Use caching where appropriate.
- Mobile-first, fully responsive.
- Optimized for Ethiopian internet speeds — careful with image sizes, code splitting, and unnecessary client JS.
- Clean navigation, no nested mega-menu rabbit holes.

Scalability

The system should support future growth in:

- Users.
- Departments.
- Events.
- Projects.
- Messages.
- Files.
- Reports.

12. AI Feature use Gemini API Key

Potential AI functionality:

- Summarize discussions.
- Summarize reports.
- Generate event reports.
- Suggest To-Do items.
- Suggest deadlines.
- Identify overdue work risks.
- Analyze department performance.

13. Video Meeting Integration

Potential integration with:

- Google Meet

14. Recommended Development Phases

Phase 1 — Core Foundation

Authentication

Roles & Permissions

Users

Departments

Teams

Phase 2 — Core Operations

Events

Projects

Tasks

Task Assignment

Task Collaboration

Phase 3 — Communication

Direct Messages

Channels

File Sharing

Real-Time Notifications

Phase 4 — Planning

Calendar

Meetings

Scheduling

To-Do

Reminders

Phase 5 — Business Modules

Talent Management

Production

Promotion

Marketing

Phase 6 — Reporting and Analytics

Daily Reports

Weekly Reports

Monthly Reports

Dashboard Analytics

My strongest architectural recommendation

The most important principle for this project should be:

Everything should be connected.

For example, an event should not exist separately from its tasks, communication, calendar, meetings, teams, and reports.

EVENT

|

├— PEOPLE

├— TEAMS

├— TASKS

├— DISCUSS

├— MEETINGS

├— CALENDAR

├— FILES

└— REPORTS

This connected-workspace approach will make your application much more professional, scalable, and useful than building separate modules that do not communicate with each other.
